THREE-BIN “GOBLET” WASTE SORTING UNIT COD. ART. UIDC1109_K3RSU

Structure:

Bins made of laser-cut shaped sheet steel, thickness 15/10, with a “crown” in round tube $\varnothing 20 \text{ mm} \times 1.5 \text{ mm}$. Central supporting pole in galvanized round steel tube $\varnothing 90 \text{ mm}$, featuring a decorative spherical element at the top and a round base plate for ground anchoring. On request, the unit can be supplied with an additional removable inner liner in the same color as the structure and a removable ashtray. Emptying system with release mechanism operated by an Allen key supplied as standard.

Finish:

The galvanized steel parts first undergo a pre-treatment process to remove impurities through vapor degreasing solutions, then are dried and coated by electrostatic spray painting, which applies powder paint in a fine particulate state.

The product is then cured in an oven, where the powder solidifies through baking at a temperature of 180–200°C in a hot-air circulation furnace. After curing, the parts are naturally cooled.

The powders used in the coating process are non-toxic and compliant with current regulations.

RAL color selection according to customer preference.

Usable capacity per bin: approx. 28 liters each.

Overall dimensions: 89 × 89 × 110 cm (H).

Anchoring: flush with ground level.

VERSION STANDARD

VERSION WITH REMOVABLE ASHTRAY
